

Machine Learning for Image Classification

Authors: Dr. Sarah Johnson, Prof. Michael Chen

Year: 2024

Abstract

This paper presents a comprehensive study of deep learning techniques for image classification tasks. We explore convolutional neural networks, transfer learning, and data augmentation methods. Our experiments show significant improvements in accuracy on benchmark datasets like ImageNet and CIFAR-10. We also identify gaps in current approaches and propose future research directions in few-shot learning and model interpretability.
